I also plan to machine new aluminum bushings. But even after removing the two screws securing the bushing to the motor, there is no way to make it slide off of the shaft and Iâ€™m afraid to break it. Damaged reel tables on the TSR8 is always a big headache. After a bit of a struggle I have managed to remove the reel decks from the motor shafts via the two set screws and some careful pulling (they were stuck fast). Is that the 'Reel Table Assy' or the 'Reel Table (picture number 4)' to fix that wobbly problem? For subjects related to tape itself, see the Open Reel subforum under this one. I think this drawing will make things much clearer for you! I was afraid that there were some other mechanical fixing despite the diagram not showing any - for instance behind the plastic inserts in the centre of item 2. How did the OP manage to remove the reel tables from the motor shafts ? It is almost as if items 2 and 4 have been glued together. That entire assembly is what I have before me on the bench. However, item 2 is very firmly bonded still to item 4. How do I separate the plastic NAB hubs from the aluminium backing plate? Then You'll need to follow the 2 easy steps to download the specific Semi-Pro tape Recorder Manuals and Schematics in a Rar or Zip file. And I mean I cannot separate them by hand using reasonable force. All these manuals are FREE downloads... These include general usage, recording, playback, and service questions. What do I need? The mission was a win: the parts separated by carefully inserting a razor blade between them. I had new ones custom made. The sub assembly often times cracks but also the reel table either is cracked or damaged as well. This is probably a daft question, but I don't want to break something accidentally! As for the rest of the machine, it seems in perfect condition though I will be studying the service manual to work through the various test and calibrations I am grateful for any suggestions. The sub section is often press fit to the reel table and my first one I had to take out cutting it with a Dremel drill. I've got all the same problems. If this continues I'll pull the damn stuff... Same instructions apply, however. I can see I need to do this to access the screw heads but it is not obvious (to me) how these are secured.
